Personal Information

Citizenship	Japan
Language	English (fluent), Japanese (native)

Education

2019 **Ph.D. in Medicine**, *Graduate School of Medicine, The University of Tokyo*, Japan.

2013 **M.D.**, *Faculty of Medicine, The University of Tokyo*, Japan.

2013 **B.A.**, *Faculty of Medicine, The University of Tokyo*, Japan.

Research Interests

- Econometrics
- Biostatistics and Epidemiology
- Health Economics
- Labor Economics
- Public Finance

Qualification

2013 Medical Doctor in Japan

Appointments and Affiliations

Academic Positions

04/19 – present **Project Researcher**, *Graduate School of Economics, The University of Tokyo*, Tokyo, Japan.

I am in charge of management and analysis of highly confidential microdata that covers the entire population in Japan: the Japanese national medical claims data and the Japanese Census data. The data size is up to several terabytes with 40 billion records per table. My main work is to perform a longitudinal linkage of individuals for each data. MySQL, Oracle SQL, R, Python, and Bash are used for the projects.

04/19 – present **Part-time Researcher**, *TXP Medical Co., Ltd.*, Tokyo, Japan.

I am working on a project to create a framework that enables efficient usage of electronic health records for clinical research purposes. R is used for the project.

04/19 – present	**Part-time Researcher**, *Department of Hematology, Tokyo Metropolitan Cancer and Infectious Diseases Center Komagome Hospital*, Tokyo, Japan.
	I am working with clinical medicine specialists to apply statistical models that have rarely used in the domain but are considered to be useful theoretically to clinical data.
07/17 – 03/19	**Project Researcher**, *Department of Health Policy, Graduate School of Medicine, The University of Tokyo*, Tokyo, Japan.
	Using the Japanese national medical claims data, I described the trend in the share of generic drugs for commonly-prescribed medicines from 2009 to 2015, stratified by various demographic groups. Oracle SQL with Oracle Exadata was used for the project.

Appointments at Hospitals

07/16 – present	**Nephrologist**, *Chiba Aiyukai Kinen Hospital*, Chiba, Japan.
01/16 – 06/16	**Nephrologist**, *Ageo Central General Hospital Eight Nine Clinic*, Saitama, Japan.
04/15 – 12/15	**Physician**, *Nishimura Heart Clinic*, Saitama, Japan.
04/14 – 03/15	**Resident**, *The University of Tokyo Hospital*, Tokyo, Japan.
04/13 – 03/14	**Resident**, *The Fraternity Memorial Hospital*, Tokyo, Japan.

Research Experience

08/17 – 03/19	**Research Assistant for Hidehiko Ichimura**, *Graduate School of Economics, The University of Tokyo*.
	I worked on a project to investigate the preventive effects of early consultation on the onset of fatal diseases through the improvement of lifestyle diseases using large-scale medical claims data and annual health checkup data. Microsoft SQL Server and R were used for the project.
02/17 – 03/17	**Research Assistant for Hajime Sato**, *National Institute of Public Health*.
	I was engaged in the survey and summarization of the current state of clinical research regulations in Japan for the establishment of the clinical research law.
07/16 – 03/17	**Research Assistant for Yuichi Tei**, *Graduate School of Engineering, The University of Tokyo*.
	As a data manager, I worked on anonymization, data cleaning, and data extraction of company labor management systems and annual health checkup data. R was used for the project.

Honors and Awards

2014	**Award of Excellence**, *Grand Round of Internal Medicine, The University of Tokyo Hospital*.

Grants

2019 **Investigator**, *Elucidation of regulatory mechanisms for latent infection in progenitor cells and molecular mechanisms for virus reactivation along with cell differentiation (PI: Ayumi Taguchi), Japan Agency for Medical Research and Development (AMED).*

We conducted two projects that explore the application of statistical models that have rarely used in the domain but are considered to be useful theoretically to clinical data: (1) we applied a statistical method for panel data from a semi-Markov process to predict the prognosis of cervical intraepithelial neoplasia according to the genotypes of high-risk human papillomavirus; (2) we applied survival analysis considering competing risks, time-dependent covariates, and interaction terms for exploring the heterogeneous impact of cytomegalovirus reactivation on non-relapse mortality in hematopoietic stem cell transplantation.

Dissertation

Title *Claims-based algorithms for common chronic conditions were investigated using regularly collected data in Japan*

Supervisor Yasuki Kobayashi

Description The literature of claims-based algorithm (CBA) has two features to be refined: the use of a chart review as a source of the gold standard; the procedure of searching for a fine-tuned CBA based on existing knowledge regarding target conditions. The first feature limits the population to which the CBA can be applied and the second makes the CBA construction procedure to be an overly complicated and cumbersome matter. Moreover, the burden of reviewing charts and searching for a fine-tuned CBA lead to a slow establishment of acceptable CBAs because it discourages researchers from CBA studies. The sluggish establishment of usable CBAs can be a big issue as the codes recorded in the claims for transmitting information about patients are supposed to change periodically. The dissertation focused on CBAs for identifying patients with three common chronic medical conditions, hypertension, diabetes, and dyslipidemia, and (1) demonstrated the usefulness of health screening results as the source of gold standard; (2) showed the power of statistical learning methods to develop an efficient CBA construction procedure; (3) proposed a course of action for an efficient CBA research. I believe that the series of techniques evaluated in the study should become essential in future CBA research.
